

# PVCu Replacement Door Handle Range

Introducing the latest addition to the Yale product portfolio, the PVCu Replacement Door Handle Range

# PVCu Replacement Door Handle Range

Does the handle on your door look tarnished or no longer operates smoothly? The latest addition to the Yale product portfolio has been developed to provide modern replacement door handles for PVCu, Composite and Wooden doors.

By developing a door handle that has multiple fixing hole positions it overcomes the problem of the different fixing positions seen on each brand of multi point locks. It also has the added benefit of extensive finish testing which means that the furniture fitted on your door will look as good as new for many years to come.

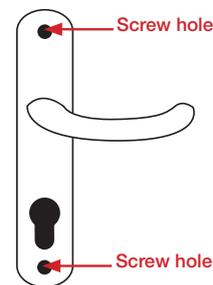

## PVCu handles explained:

There are 2 styles of handles for multi-point locks. Style 1 has the fixing screws at the top and bottom of the back plate whilst style 2 has a fixing screw underneath the handle and one at the bottom of the back plate.

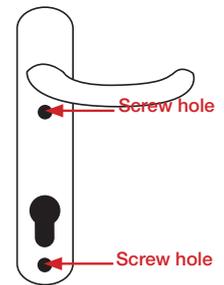

The fixing screw position is important when the handles are being used on doors fitted with a multi-point lock. This is because each Brand of multi-point lock has different fixing hole positions in their lock. If you select the wrong handle for your lock then you may find the fixing screws will hit the lock body and you are not able to secure the handle to the door.

The Yale PVCu replacement handle has multiple fixing positions which cover both styles of handles.

Style 1

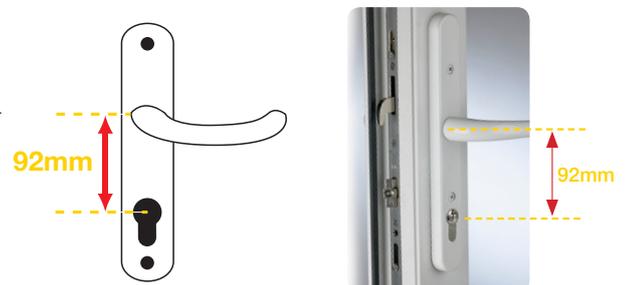

Style 2

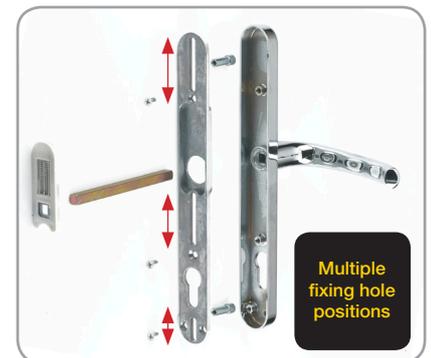

## How do you know what size your lock centre is?

Multi-point lock are available with different lock centres, however the most popular size is 92mm. To find out what size your lock is you need to measure between the centre of the handle and the key hole as illustrated below.

## Features – Door handles

- Replacement door handle for Multi-point locks with 92mm lock centres
- Can be used on PVCu, Composite and Wooden doors
- Multiple fixing hole positions to cover most brands of locks
