

Pet friendly PIR Disclaimer

Pet friendly:

Will not be triggered by any pet which is less than 26kg (and under 70cm in height)

Recommended installation height:

1.9m above the ground

Size of room:

Maximum of 8m in either length or width

Detection angle: 110 deg

* **NOTE:** If any pet is more than 8m away from the pet friendly PIR, there is a chance that it will be detected.

For human height (average 160 cm or above), it has a 1.5 m dead zone (no detection) from the Pet immune PIR.

IMPORTANT NOTES

1. Do not position directly facing a door contact - this could cause the door contact and PIR radio signals to be transmitted at the same instant, canceling each other out.
2. Do not install exposed to direct sunlight.
3. Avoid installing in areas where there may be rapid changes of temperature in the detection area e.g. air conditioner
4. Avoid large obstacles in the detection area.
5. Do not position directly facing a heat source e.g. fires or boilers, and not above radiators.
6. Avoid moving objects in the detection area e.g. curtains
