The world's favorite lock

Quality for quality of life

Yale sets the highest criteria for qualifying and classifying consumer locking and security solutions with the Yale Global Performance Standard, one of the leading padlock standards in the industry today. Yale padlocks come with a lifetime warranty. The result: Unwavering consumer confidence in the safety, reliability and performance of all the products that carry the Yale brand name. And most importantly, millions of individuals are able to get on with their lives with confidence; to follow their dreams, pastimes, aspirations, desires, and all the experiences that make up the Yale brand world.

culture of innovation

The Yale Heritage: Lock innovations since 1865

In 1865, Linus Yale, Jr. of Salisbury, New York, patented his most important invention, the Yale cylinder lock and key system that was to make Yale a household name. Inspired by basic principles first used by the ancient Egyptians 4,000 years before, the new type of lock applied a simple yet ingenious approach that has positioned Yale as the world's favorite lock brand.

Yale's European history began in 1904 when Yale established operations in London, Paris and Hamburg, with manufacturing starting a few years later in England, and a few decades later in Italy.

Yale innovations have not only transformed Yale, but have also shaped the global locking industry as we know it today.

unlocking the future

A global knowledge pool

Linus Yale's spirit of innovation lives on in the Yale brand today. Everyone in the company recognizes that a great deal of effort goes into maintaining a number one position. It is only constant innovation that allows the highest quality products to be available to everyone. Our vision at Yale is to build on our heritage and energize it with new knowledge for the future.

Yale's new padlock range demonstrates the brand's dedication to applying the latest insights in usability, sustainability, materials and production methods to offer some of the highest quality and most secure padlocks on the market today – and tomorrow, the world over.

The Yale mark is a promise of quality. Yale padlocks are for life - for every type of situation, and for a lifetime of high performance.

the new Yale padlock range

Perfection reinvented

It may seem like an impossible task to improve on an object that has already been a part of our lives for generations. But with new developments in design innovation, materials and changing end user needs, Yale applies new insights into production techniques to make its products as user-friendly and as secure as possible.

As the world changes, Yale locks evolve. The new Yale padlock range is divided into 3 series to help the end user to easily identify the lock they need. Whether Black, Silver or Classic, the new Yale padlock range offers universally relevant locking solutions to survive years of use in all types of environments.

SERIES Y120/70

SERIES Y120/50

Black Series

The Black Series offers some of the highest security padlocks available. These locks are serious heavy-duty gear tough enough for industrial or commercial use. Thicker protective bodies, smooth design, and attack-resistant protective shrouds mean these locks will survive some of the most challenging conditions on earth, such as prolonged exposure to wetness, salt, sub-zero temperatures, heat and rapid temperature changes, as well as various forms of attack.

The Black Series rates between 7 and 10 on the Yale security rating scale, offering maximum security corrosion and attack resistance.

Molybdenum has unique characteristics that add to the strength and durability of stainless steel. It has been proved extremely reliable in critical situations such as in the nuclear, defense and space industries where the slightest risk of corrosion would be catastrophic.

marine/extreme

Y300SS/63/127/1

Body material: Marine Grade Stainless Steel/Natural
Shackle material: Stainless Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 7
Corrosion rating: Exposed

Y90SS/45/129/1

Body material: Marine Grade Stainless Steel/Natural
Shackle material: Stainless Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 7
Corrosion rating: Exposed

Y300C/63/127/1

Body material: Hardened Steel/Black
Shackle material: Molybdenum Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 8
Corrosion rating: Exposed

Y300/63/127/1

Body material: Hardened Steel/Black
Shackle material: Molybdenum Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 8
Corrosion rating: Exposed

Y100/70/125/1

Body material: Heavy Duty Hardened Steel/Black
Shackle material: Molybdenum Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 9
Corrosion rating: Exposed

Y90S/45/129/1

Body material: Hardened Steel/Black
Shackle material: Molybdenum Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 8
Corrosion rating: Exposed

Y290S/95/122/1

Heavy duty body with shackle shroud

Padlock with an integrated body extension protects the shackle from attack.

Body material: Heavy Duty Hardened Steel/Black
Shackle material: Molybdenum Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 10
Corrosion rating: Exposed

Silver Series

The Silver Series offers general security padlocks for both indoor and outdoor conditions. Tough satin chrome-plated finishes and Boron shackles maximize corrosion and security resistance ratings. Smooth rounded forms also increase resistance to attack.

These locks are, at the very minimum, rated between 4 and 6 on the Yale security rating scale.

Boron is a high-grade precision steel. Due to its supreme strength it is used in advanced automotive applications and in heavy-duty industrial applications.

outdoor

Y120/40/125/1

Body material: Solid Brass/
Satin Chrome
Shackle material: Boron Steel
No. of padlocks: 1
No. of keys: 3
Security grading: 5
